

Who We Are:

Soundwaves of New England has over 20 years experience in consumer electronics and over 12 years in custom installations. Low overhead keeps the costs down while maintaining quality. Having worked within the Electronics industry, we've gained a unique insight into the products available. We offer that insight to you.

What We Do:

Soundwaves offers the home owner a way to procure quality audio and video products without the "Input Overload" often associated with Home Electronics. We assess your wants and needs to determine a focused set of options. Your home can be brought into the future without headaches. We make your home work for you!

What We Offer:

- Whole House Audio - One Source
- Whole House Audio - Multi Source
- Home Theater Design & Installation
- Future-Proofing the New Home
- Structured Wiring Packages
- Computer Networking & Installation
- Computer Support & Training

Whole House Audio - Multi Zone

Any single source (CD, iPod, etc.) can be heard in any number of rooms at the same time. You can choose to have a volume control in each room, or a keypad to control the volume, source selection and bass/treble (or any combination). This can also be done with Video!

Whole House Audio - Multi Source

Listen to any one of 4 sources in any room at any time. Infra-red keypads control almost all functions available and you can even use a remote control. You can also turn the entire system on or off from any location or turn on "Party" mode where all zones act as one zone. This can also be done with Video!

Home Theater & Surround Systems

Surround systems are usually Dolby Digital® receivers that you use with a TV, DVD player, 5 speakers and a subwoofer. The speakers can be hidden in the walls so they don't become part of the room.

Home Theaters are rooms that have been dedicated to recreating the movie experience in the home. Soundwaves offers complete design, installation, tuning, treating, programming and training of home theater rooms.

Computer Networking

Soundwaves can not only wire your home for a whole computer network, but we also design, configure, install and troubleshoot your computers. We also instruct users to be proficient at Microsoft Windows®, Office® and a large number of other popular applications.

Structured Wiring Packages

Preparing the new home for electronics can be easier than you think. Ensure that all rooms have connections for cable TV, satellite TV, telephone and data (computer network). Design can be customized for your needs. Perhaps you need a computer network outlet in the garage, or a phone in the bathroom. Soundwaves can do it all affordably.

Future-Proofing the Home

A complete analysis is done to determine the areas most likely to need communication. All wiring is CAT-6 and up to 3 locations are used for wireless routers. All appliance areas and entertainment rooms have terminations for data. Pullwires, whips, conduits and chase-ways are also used in some locations. CAT-5 is run to likely camera and intercom areas. A complete digital photo library is created that includes dimensions.
